

Ukash Virus REMOVE Instructions

Reboot into Safe Mode with Command prompt
at C:\Windows\System32> type: net user {username} /add (enter)then
type: net localgroup administrators {username} /add (enter)

Restart & login to newly created profile.

In windows explorer go to: c:\users\{affected a/c}\AppData\Roaming
in this location there are three sub dirs: Identities Media Center Programs
& Microsoft with two files that is the Virus:
skype.dat & skype.ini (but I think they could be any name, not necessarily
'Skype')

Delete these two Files.

Restart the PC & the problem will have been resolved.

You can remove the new profile in the Control Panel / User Accounts
feature.
